

AMENDMENTS TO THE SPECIFICATION

Please amend the paragraph beginning at page 2, line 3 as follows:

Conventionally, it has been considered that degradation in image quality which occurs when the moving image is displayed on the hold-type display is caused by the fact that the response speed of the display device is low. With recent advances in visual studies, however, it has been found that predetermined degradation in image quality cannot be avoided even if the response speed of the display device is improved, resulting in instantaneous response. Such degradation in image quality is referred to as ~~“Hold Burring”~~ “Hold Blurring”.
